Summary Writing Workbook

Step-by-step practice for Paper 1 Question 2: the 120-word summary (15 marks) and the new 2(b) attitudes question (5 marks), with six original articles and model answers for every one.

- ◆ 6 original articles
- ◆ 5-step summary method
- ◆ Points lists for every article
- ◆ 6 model 2(b) answers
- ◆ 3 guided, 3 independent
- ◆ Own-words toolkit
- ◆ 6 model summaries (≤ 120 words)
- ◆ Mistakes page & tracker

Marcé van Moerkerken

PGCE Secondary English (Summa Cum Laude)
International school English teacher, UAE

For exams in 2027, 2028 and 2029. Independent practice material; not produced or endorsed by Cambridge University Press & Assessment. All articles are original.

The method

Question 2 is based on Text B. Part (a) asks for a selective summary in continuous prose of no more than 120 words: 10 marks for reading (the points) and 5 for writing (clarity, concision, own words). Part (b) asks about the writer's attitudes or opinions, for 5 marks.

1 Lock the focus	Rewrite the question's focus as a heading. Only points that answer it count.
2 Harvest	Number every relevant point in the margin. Ignore examples, statistics and anecdotes unless they <i>are</i> the point.
3 Group	Merge related points under an umbrella word.
4 Write once, tightly	100–115 words, no introduction, no conclusion, no opinions.
5 Check	Count the words. Cross out any phrase copied from the text.

Own-words toolkit

Swap the phrase

- "enormous quantities" → vast amounts
- "poisoning fish" → killing wildlife
- "barely enough to live on" → extremely low
- "worn only a handful of times" → discarded after a few wears
- "wandering minds are creative ones" → a drifting mind produces original ideas
- "seek out other people" → look for company
- "no aircraft can land" → the station is cut off
- "small irritations" → minor annoyances

Use umbrella words

- water use, river pollution, plastic fibres → **environmental damage**
- low pay, long hours, unsafe buildings → **poor working conditions**
- cold, darkness, isolation → **physical and emotional hardships**
- tourists, shops, jobs → **economic benefits**

2(b): one structure, every time

ATTITUDE + EVIDENCE + EXPLANATION: "The writer is *sceptical* of fashion companies: saying they 'insist' they are changing suggests the writer does not believe them." Useful attitude words: admiring, critical, sceptical, sympathetic, dismissive, balanced, optimistic, cynical.

Five mistakes that cost summary marks

Mistake	Weak	Strong
Copying	Dyes and chemicals from factories often pour into rivers, turning them strange colours.	Factory chemicals contaminate rivers.
Examples	A single pair of jeans can require thousands of litres of water.	Producing clothes consumes vast amounts of water.
Note form	• water • chemicals • plastic • wages	Continuous prose linked with connectives: “also”, “in addition”, “finally”.
Opinions	I think fast fashion is terrible and everyone should stop buying it.	No opinions: report the text’s points only.
Too long	An introduction, every point in detail, a conclusion: 170 words.	100–115 words. Anything over 120 is not credited.

QUICK CHECK: Could someone who had never read the article understand your summary? Does every sentence answer the focus? If yes to both, you are on track.

The True Cost of Cheap Clothes

- 1 A T-shirt that costs less than a sandwich seems like a bargain. But the true cost of ‘fast fashion’ – cheap clothes produced quickly to follow the latest trends – is paid elsewhere.
- 2 The first price is paid by the environment. Making clothes uses enormous quantities of water: a single pair of jeans can require thousands of litres, much of it for growing cotton. Dyes and chemicals from factories often pour into rivers, turning them strange colours and poisoning fish. Many cheap garments are made from synthetic fabrics which shed tiny plastic fibres every time they are washed, and these fibres end up in the sea.
- 3 The second price is paid by workers. To keep prices low, many factories pay wages that are barely enough to live on, and some employees work long hours in unsafe buildings. When I visited one factory, a young woman told me she had not seen her children in daylight for a week.
- 4 The third price is paid by all of us in waste. Because fast fashion is designed to be replaced, clothes are often worn only a handful of times before being thrown away. Mountains of unwanted garments end up in landfill or are shipped abroad, where they overwhelm local markets.
- 5 Fashion companies insist they are changing, and some have introduced recycling schemes and ‘green’ collections. But these are small steps compared with the scale of production, and they often seem designed more to improve the brand’s image than to solve the problem.
- 6 Shoppers are not powerless. Buying fewer, better-made clothes, repairing what we own and shopping second-hand can all make a difference. The cheapest T-shirt, it turns out, is the one we never needed to buy.

Questions

- (a) According to the text, what are the problems caused by fast fashion? Write a summary in continuous prose, using your own words as far as possible. Your summary should be no more than **120 words**. [15]
- (b) What is the writer’s attitude towards fashion companies? Explain how you can tell. [5]

Plan your summary

Step 1 • Focus heading	The problems caused by fast fashion
-------------------------------	-------------------------------------

Step 2 • Harvest the points

9		
10		

Step 3 • Group under umbrella words

Group A	
Group B	
Group C	

Step 4 • Write 100–115 words. **Step 5 •** Count: _____ words. Cross out any copied phrases. ☐ No examples ☐ No opinions ☐ Third person

In Praise of Boredom

- 1 When did you last do absolutely nothing? For many young people, the answer is ‘never’. Every spare second – in the queue, on the bus, in the gap between lessons – is filled by a screen. Parents, too, pack their children’s weeks with clubs, lessons and activities, afraid that an empty afternoon is a wasted one.
- 2 Yet psychologists increasingly believe that boredom is not an enemy but a friend. When the mind has nothing to hold on to, it begins to wander, and wandering minds are creative ones. In one well-known experiment, people who had first completed a dull task – copying numbers from a phone book – came up with more imaginative ideas afterwards than those who had not.
- 3 Boredom also pushes us to act. The uncomfortable restlessness it creates is a signal that something needs to change, prompting us to start a new project, learn a skill or seek out other people. Many writers and inventors describe childhood summers with ‘nothing to do’ as the time when their passions began.
- 4 There are quieter benefits too. Time without stimulation gives the brain a chance to rest and to process what has happened, and some researchers link it to better self-understanding. A child who is never bored may never learn how to entertain themselves.
- 5 None of this means that all boredom is good. Endless, empty days can lead to low mood, and boredom at school can be a sign that work is not challenging enough. But the occasional empty hour, without a phone, may be one of the best gifts we can give ourselves.
- 6 So next time you are waiting for a bus, leave your phone in your pocket. You may be surprised by where your mind decides to go.

Questions

- (a) According to the text, what are the benefits of boredom? Write a summary in continuous prose, using your own words as far as possible. Your summary should be no more than **120 words**. [15]
- (b) What is the writer’s attitude towards filling every spare moment with activity? Explain how you can tell. [5]

Plan your summary

Step 1 • Focus heading	The benefits of boredom
-------------------------------	-------------------------

Group C	

Step 4 • Write 100–115 words. **Step 5 •** Count: _____ words. Cross out any copied phrases. ☐ No examples ☐ No opinions ☐ Third person

Six Months at the Bottom of the World

- 1 Every winter, a small team of scientists and support staff remains at the research station while the rest of the world forgets they exist. For six months, no aircraft can land. Whatever happens, they are on their own.
- 2 The first challenge is the cold. Outside, temperatures can fall below minus sixty degrees, cold enough to freeze exposed skin in minutes. Nobody leaves the buildings without checking in, and even a short walk to the weather instruments requires layers of specialist clothing.
- 3 Then there is the darkness. For weeks in midwinter the sun does not rise at all, and many people find their sleep patterns collapse. Some struggle with low mood, and the station doctor keeps a careful eye on everyone. 'You learn to create your own daylight,' the station leader told me, pointing to the bright lamps in the common room.
- 4 Isolation is harder still. Contact with home is limited to brief, crackling calls and messages. If a family member falls ill, there is no way to leave. Living with the same dozen people for months, in cramped quarters, means that small irritations – a loud laugh, an unwashed mug – can grow into serious tensions.
- 5 Practical problems never stop. Equipment breaks and must be fixed with whatever is available. Food supplies must last until the first plane of spring, so fresh fruit and vegetables disappear within weeks.
- 6 And yet, almost everyone I met said they would come back. They spoke of skies filled with shimmering green lights, of the deep friendships formed, and of work that helps the world understand its changing climate. 'It's the hardest thing I've ever done,' one young engineer said, 'and the best.'

Questions

- (a) According to the text, what are the difficulties faced by people who spend the winter at the research station? Write a summary in continuous prose, using your own words as far as possible. Your summary should be no more than **120 words**. [15]
- (b) What is the writer's attitude towards the people who spend the winter at the station? Explain how you can tell. [5]

Plan your summary

Step 1 • Focus heading	The difficulties faced by people who spend the winter at the research station
-------------------------------	---

Pedal Power

- 1 Fifty years ago, many cities were busy tearing up tram lines and widening roads for cars. Today, some of the same cities are painting cycle lanes, building bike bridges and even closing streets to traffic. Why the change of heart?
- 2 The first reason is space. A single car lane moves far fewer people per hour than the same width of cycle lane, and a parked car takes up the room of roughly ten parked bicycles. As cities grow more crowded, planners have realised that bicycles are simply a more efficient way to move people through limited space, easing the congestion that wastes millions of hours each year.
- 3 Cycling also cleans the air. Every short journey made by bike rather than car means fewer exhaust fumes and lower carbon emissions, and in dense city centres this can make a noticeable difference to pollution levels.
- 4 Health is another powerful motive. Regular cycling builds fitness, reduces the risk of heart disease and improves mental well-being, which in turn eases pressure on hospitals. For residents, a bicycle is also far cheaper to buy and run than a car, and for journeys of a few kilometres it is often faster, since cyclists avoid traffic jams and never have to search for a parking space.
- 5 Cities themselves save money: cycle lanes cost a fraction of new roads to build and maintain. Streets with fewer cars are quieter and more pleasant, and several studies suggest that local shops benefit, because cyclists stop more often than drivers who speed past.
- 6 Not everyone is convinced. Some drivers complain of a 'war on motorists' as lanes are narrowed and parking removed. Their frustration is understandable, but it is misplaced: every person on a bike is one fewer car in the queue ahead of them. Cycling, it seems, may be the rare policy where almost everyone wins.

Questions

- (a) According to the text, what are the reasons why cities are encouraging cycling? Write a summary in continuous prose, using your own words as far as possible. Your summary should be no more than **120 words**. [15]
- (b) What is the writer's attitude towards drivers who oppose cycle lanes? Explain how you can tell. [5]

Volunteering Abroad: Who Really Benefits?

- 1 Every year, thousands of young people pay to spend a few weeks volunteering in another country – teaching English, building classrooms or caring for children. Most are kind and well-meaning. But a growing number of aid workers are asking an uncomfortable question: who is this really for?
- 2 The first problem is skill. A school leaver with no training would not be allowed to teach a class or build a wall at home, yet abroad they often do both. Walls built by volunteers sometimes have to be taken down and rebuilt by local labourers once the visitors have gone. And every job done by an unpaid foreigner is a job that could have paid a local worker.
- 3 Short stays cause their own damage. Children in schools and care homes may meet a new volunteer every fortnight, forming attachments that are broken again and again. Experts in child welfare warn that this cycle of attachment and loss can be deeply harmful. More disturbingly, investigations have found that some ‘orphanages’ exist largely to attract volunteers and their money, and that many children in them have living parents.
- 4 Money is another issue. The fees volunteers pay – often thousands of dollars – mostly cover flights, accommodation and the organiser’s profit. The same amount could employ a qualified local teacher for a year. Many programmes are designed around what volunteers want to experience, rather than what communities actually need.
- 5 Finally, there is dignity. Social media is full of photographs of smiling volunteers surrounded by poor children, images that treat real people’s lives as a backdrop for someone else’s adventure.
- 6 None of this means that young people should stay at home. It means asking harder questions before signing up: Does the project employ local staff? Does it need my particular skills? Will my money do more good than my presence? The best way to help is sometimes the least glamorous.

Questions

- (a) According to the text, what are the problems that short-term volunteering abroad can cause? Write a summary in continuous prose, using your own words as far as possible. Your summary should be no more than **120 words**. [15]
- (b) What is the writer’s attitude towards the young people who volunteer abroad? Explain how you can tell. [5]

Don't Knock It Down

- 1 When an old building is demolished, something disappears that can never be rebuilt. Yet across the world, historic markets, houses and cinemas are falling to the bulldozer at an alarming rate, often replaced by identical glass towers that could stand in any city on Earth.
- 2 Old buildings are more than bricks. They are a record of how people lived, worked and worshipped, and they give a town its identity. Walk through a historic quarter and you can read its past in the carved doorways and worn stone steps. Residents feel a sense of belonging to places that look like nowhere else, and many of these buildings hold shared memories: the school where grandparents studied, the hall where couples married.
- 3 They are also often beautiful in ways modern construction struggles to match. The skills that produced hand-cut stone, painted tiles or intricate wooden screens are increasingly rare, and once such work is lost it cannot simply be ordered again.
- 4 There is a strong economic case too. Historic districts attract visitors, and tourism supports restaurants, shops and jobs. Old buildings with character draw small businesses and creative industries that bring life back to neglected streets.
- 5 Perhaps surprisingly, conservation can also be the greener choice. Demolition creates vast quantities of waste, and making new concrete and steel releases large amounts of carbon dioxide. Repairing and reusing an existing building usually has a far smaller environmental cost than replacing it.
- 6 Of course, not every old building can be saved. Some are unsafe, and cities must grow. But too many decisions are driven by short-term profit rather than long-term value. The cities we admire most are those that learned to keep the best of their past while building their future.

Questions

- (a) According to the text, what are the reasons for protecting old buildings? Write a summary in continuous prose, using your own words as far as possible. Your summary should be no more than **120 words**. [15]
- (b) What is the writer's attitude towards those who demolish old buildings? Explain how you can tell. [5]

The True Cost of Cheap Clothes: answers

(a) Points to credit *1 mark each, up to 10 for reading*

- | | |
|--|--|
| 1. huge amounts of water used, especially for cotton | 7. long working hours |
| 2. dyes and chemicals pollute rivers | 8. unsafe workplaces |
| 3. pollution kills fish / wildlife | 9. clothes are worn only a few times |
| 4. synthetic fabrics shed plastic fibres when washed | 10. large amounts go to landfill |
| 5. the fibres pollute the sea | 11. unwanted clothes exported abroad swamp local markets |
| 6. very low wages for workers | |

Model summary *104 words*

Fast fashion damages the environment in several ways. Producing clothes consumes vast amounts of water, particularly for cotton, while factory chemicals contaminate rivers and kill wildlife. Synthetic garments also release microscopic plastic fibres when washed, which eventually pollute the oceans. The industry harms the people who make the clothes too: to keep costs down, many factories pay extremely low wages and expect long hours in dangerous conditions. Finally, because the clothes are designed to be replaced quickly, they are often discarded after only a few wears, creating huge amounts of waste, some buried in landfill and some sent overseas, where it swamps local markets.

(b) Model answer *5 marks*

The writer is sceptical of fashion companies. Saying that they “insist” they are changing suggests the writer does not believe them. Their recycling schemes are dismissed as “small steps compared with the scale of production”, implying they are inadequate. The writer is also cynical about their motives, suggesting the “green” collections are “designed more to improve the brand’s image” than to help. Finally, the writer implies the companies are responsible for exploitation, since low wages exist “to keep prices low”.

In Praise of Boredom: answers

(a) Points to credit *1 mark each, up to 10 for reading*

- | | |
|---|--|
| 1. the mind wanders, which encourages creativity | 7. it is where many passions / interests begin |
| 2. people have more imaginative ideas after a dull task | 8. the brain can rest |
| 3. restlessness signals that change is needed | 9. the brain can process experiences |
| 4. it motivates new projects | 10. it may improve self-understanding |
| 5. it motivates learning new skills | 11. children learn to entertain themselves |
| 6. it prompts people to seek company | |

Model summary *101 words*

Boredom can be surprisingly beneficial. When the mind is unoccupied, it drifts, and this makes people more creative; research suggests that people produce more original ideas after a tedious task. The discomfort of boredom also acts as a warning that change is needed, motivating people to begin new projects, develop skills or look for company, and many creative people trace their interests back to empty childhood holidays. In addition, periods without stimulation allow the brain to recover and make sense of recent experiences, which may help people understand themselves better. Finally, being bored teaches children to find ways to occupy themselves.

(b) Model answer *5 marks*

The writer disapproves of filling every spare moment. The phrase “Every spare second... is filled by a screen” presents this as an unhealthy habit. The writer implies that parents are misguided, describing them as “afraid that an empty afternoon is a wasted one”, as if their fear is unnecessary. The warning that a child who is never bored “may never learn how to entertain themselves” shows the writer thinks constant activity is harmful. However, the writer is balanced, admitting “not all boredom is good”, and ends by gently encouraging readers to “leave your phone in your pocket”.

Six Months at the Bottom of the World: answers

(a) Points to credit *1 mark each, up to 10 for reading*

- | | |
|--|---|
| 1. no aircraft for six months / completely cut off | 7. some suffer low mood |
| 2. extreme cold (below minus sixty) | 8. limited contact with home |
| 3. exposed skin can freeze in minutes | 9. no way to leave in a family emergency |
| 4. even short trips outside need checking in and specialist clothing | 10. cramped quarters with the same people |
| 5. weeks of total darkness | 11. small irritations become serious tensions |
| 6. sleep is disrupted | 12. broken equipment must be improvised |
| | 13. fresh food runs out quickly |

Model summary *107 words*

People who stay through the winter face many hardships. For six months no planes can reach the station, so they are completely cut off. The cold is extreme, capable of freezing skin within minutes, so even brief trips outdoors require careful planning and special clothing. Weeks of continuous darkness disrupt sleep and can cause depression. Communication with home is limited, and staff cannot return even in a family emergency. Sharing a small space with the same few people for months means minor annoyances can turn into serious conflict. In addition, broken equipment must be repaired with limited resources, and fresh food runs out soon after winter begins.

(b) Model answer *5 marks*

The writer admires them. Stressing that “Whatever happens, they are on their own” highlights their courage and self-reliance. The detailed description of the cold, darkness and isolation shows sympathy for how much they endure. The writer is clearly impressed that “almost everyone... said they would come back”, and values their contribution, describing work “that helps the world understand its changing climate”. Ending with the engineer’s words, “the hardest thing I’ve ever done... and the best”, leaves the reader with respect for them.

Pedal Power: answers

(a) Points to credit *1 mark each, up to 10 for reading*

- | | |
|---|---|
| 1. bicycles use road space more efficiently | 8. eases pressure on hospitals |
| 2. they need far less parking space | 9. cheaper for residents than a car |
| 3. reduces congestion | 10. faster for short trips (no jams or parking) |
| 4. cleaner air / fewer fumes | 11. cycle lanes are cheap to build and maintain |
| 5. lower carbon emissions | 12. quieter, more pleasant streets |
| 6. improves fitness / reduces heart disease | 13. local shops benefit |
| 7. better mental well-being | |

Model summary *107 words*

Cities are promoting cycling for several reasons. Bicycles use road and parking space far more efficiently than cars, reducing congestion in crowded areas. Replacing car journeys with bike rides also lowers pollution and carbon emissions. Cycling improves people's physical and mental health, which reduces demand on hospitals, and it is much cheaper for residents than owning a car, as well as quicker for short trips because cyclists avoid traffic and parking problems. Cities save money too, as cycle lanes are inexpensive to build and maintain. Finally, streets with fewer cars are quieter and more pleasant, and local businesses may gain because cyclists stop to shop more often.

(b) Model answer *5 marks*

The writer is understanding but ultimately disagrees with them. Saying "Their frustration is understandable" shows some sympathy for their inconvenience. However, the writer judges it "misplaced", and places 'war on motorists' in inverted commas, suggesting the phrase is exaggerated. The writer argues that drivers actually benefit, since "every person on a bike is one fewer car in the queue ahead of them", and ends optimistically that "almost everyone wins", implying that drivers will too.

Volunteering Abroad: Who Really Benefits?: answers

(a) Points to credit 1 mark each, up to 10 for reading

- | | |
|---|---|
| 1. volunteers often lack the necessary skills | 6. many children in them have living parents |
| 2. poor work has to be redone by locals | 7. fees mostly pay for travel, accommodation and profit |
| 3. takes paid jobs from local workers | 8. the money could employ local staff |
| 4. frequent changes of volunteers harm children's attachments | 9. programmes suit volunteers' wishes, not community needs |
| 5. some orphanages exist to attract volunteers' money | 10. photos on social media undermine local people's dignity |

Model summary 108 words

Short-term volunteering can cause several problems. Volunteers often lack the training for tasks such as teaching or building, so their work may be poor and have to be redone by local workers, and they take jobs that could have been paid. Frequent changes of volunteers can harm children, who repeatedly form bonds and then lose them, and some so-called orphanages exist mainly to attract volunteers' money, even though many of the children have parents. The high fees mostly pay for travel and profit rather than local staff, and programmes often reflect volunteers' wishes instead of communities' needs. Finally, images posted online can strip local people of their dignity.

(b) Model answer 5 marks

The writer is sympathetic towards the volunteers themselves, describing most as "kind and well-meaning". More of the blame falls on organisers: the fees mostly cover "the organiser's profit", and programmes are designed around what volunteers "want to experience". Although troubled by the harm caused, the writer does not want young people to give up: "None of this means that young people should stay at home." Instead, the writer encourages them to ask "harder questions", showing a constructive, guiding attitude.

Don't Knock It Down: answers

(a) Points to credit *1 mark each, up to 10 for reading*

- | | |
|--|--|
| 1. they cannot be rebuilt once lost | 7. the skills are disappearing |
| 2. a record of how people lived | 8. they attract tourists, supporting local businesses and jobs |
| 3. they give a town its identity | 9. they draw small and creative businesses that revive areas |
| 4. residents feel a sense of belonging | 10. demolition creates large amounts of waste |
| 5. they hold shared community memories | 11. new materials release carbon dioxide |
| 6. their craftsmanship is beautiful and rare | 12. reuse has a smaller environmental cost |

Model summary *109 words*

Old buildings deserve protection for many reasons. They preserve a record of the past and give towns a distinctive identity, helping residents feel they belong and holding memories shared by the community. Their craftsmanship is often beautiful and cannot easily be reproduced, because the necessary skills are disappearing. Historic areas also bring economic benefits, attracting tourists who support local businesses and jobs, and drawing small and creative companies that revive neglected areas. In addition, reusing buildings is usually better for the environment, since demolition generates large amounts of waste and producing new materials releases significant carbon dioxide. Finally, once an old building is destroyed, it can never be replaced.

(b) Model answer *5 marks*

The writer is critical of them. Saying old buildings are “falling to the bulldozer at an alarming rate” shows that the writer is worried and disapproving. The replacements are dismissed as “identical glass towers that could stand in any city on Earth”, implying they lack character. The writer accuses decision-makers of being driven by “short-term profit rather than long-term value”. However, the writer is fair, accepting that “not every old building can be saved” because some are unsafe and cities must grow.

Marking guidance & tracker

Bands written for this workbook to support consistent practice marking; not official Cambridge descriptors.

2(a) Reading 10 marks

Award 1 mark per relevant point from the points list (or any valid equivalent), up to 10.

2(a) Writing 5 marks

5	Wholly relevant, concise and well organised; ideas skilfully grouped and linked; consistently own words.
4	Mostly focused and fluent; ideas clearly organised; mostly own words.
3	Generally clear; some repetition, lifting or loosely relevant material.
1-2	Much lifting, listing or note form; may be over-long or include opinion.

2(b) 5 marks

1 mark per developed point: attitude + evidence + brief explanation.
